EDUCATION

GUNADARMA UNIVERSITY — Bekasi, ID
Undergraduate degree in Computer Science | GPA: 3.71 / 4.00 — Sept 2023 – Present

EXPERIENCE

Coding Camp DBS Foundation — Remote
Full-Stack Web Developer — Feb 2026 – Jul 2026

- Completed an intensive fullstack web development and applied AI/ML program, culminating Emigria, a fraud-detection capstone platform (see Projects).
- Built the platform's UI and backend, connecting to a Neon (PostgreSQL) database for anonymized data, and integrated the team's AI/ML fraud-detection model into the pipeline.

Amartha x GDG Jakarta Hackathon — Jakarta, ID
Top 15 Finalist — Nov 2025

- Contributed as Graph Visualization Specialist on a 5-person team building SocialCollateral AI, collaborating across UI tasks with the team (see Projects).
- Achieved Top 15 finalist among 140+ competing teams.

GDGoC UG — Depok, ID
Member — Oct 2023 – Present

- Participated in various workshops and training sessions related to technology development.

PROJECTS

Glance – Quick AI Explanation Tool (v0.1.1) – GitHub

- Built a hyper-lightweight native macOS tool (Tauri + Rust + Svelte) that sits silently in the macOS menu bar; highlighting any text and pressing a global shortcut instantly streams an ELI5 explanation or TL;DR summary in a popup anchored under the tray icon.
- Engineered a gated clipboard listener in Rust so text is only captured and sent to the AI while the app is actively open, plus a near-zero RAM footprint achieved by destroying the webview on close, keeping the tool invisible to system resources.
- Implemented dual AI modes (Explain/Summary) with streaming responses, Markdown and LaTeX (KaTeX) rendering, and multi-turn follow-up conversations within the same popup window.
- Utilized: Tauri v2, Rust, Svelte 5, Vite, Groq API (Llama 3.1).

Emigria – AI Fraud Detection Platform (DBS Coding Camp Capstone) – GitHub

- Built as Full-Stack Web Developer in a 6-person team (2 Data Science, 2 AI Engineer, 2 Fullstack), focused on backend orchestration and web integration; flags fraudulent overseas job postings targeting Indonesian migrant workers.
- Implemented a two-stage AI pipeline: Google Gemini API for smart data extraction from job posters/images/URLs, feeding a TensorFlow MLP model for fraud classification.
- Utilized: React, Vite, Tailwind CSS, Express.js, FastAPI, Google Gemini API, Neon (PostgreSQL), Docker; deployed on Render (emigria.my.id)

SocialCollateral AI – Social Graph Risk Engine (MVP) – GitHub

- Contributed as Graph Visualization Specialist in a 5-person team, building the interactive network view that visualizes borrower groups as a trust graph, alongside broader UI collaboration with teammates.
- Platform converts social trust signals into a Group Trust Score for microfinance lending, combining graph analytics, NLP (Google Gemini), and computer vision (Google Cloud Vision).j
- Utilized: TypeScript, React, Tailwind CSS, Sigma.js, Chart.js, Python, FastAPI
- Achieved Top 15 finalist among 140+ teams.

SehatHemat – Budget & Nutrition Planner (MVP) – GitHub

- Personal project helping users hit budget, calorie, and protein targets based on their own inputs.
- Applied RAG over a curated Indonesian food dataset (price, calories, and protein per item) to ground a cloud LLM's recommendations in real local food data.
- Utilized: Next.js, TypeScript, Prisma, PostgreSQL

CERTIFICATIONS

Mini Course Software Engineering – RevoU, 2024
SQL Advance – HackerRank, 2025
Practical React.js & Next.js – Udemy, 2025

Bootcamp Kilat Web Dev – GDGoC UG, 2025
Belajar Fundamental Aplikasi Web dengan React – Dicoding, 2026
Belajar Fundamental Back-End dengan JavaScript – Dicoding, 2026
English for Business Communication – The British Institute x DBS Foundation, 2026
Full-Stack Web Developer – Coding Camp 2026 powered by DBS Foundation, 2026

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript.
Web Development: React, Next js, Express js, Astro js, Svelte, Tailwind CSS, RESTful APIs.
Data & Infra: Prisma ORM, MySQL, Supabase, Neon.
AI/ML & Tools: Python, FastAPI, Google Gemini API.
